INSURE BETTER DUCK HUNTING

FOR NEXT FALL - -

Plant Legal Natural Foods Now.

The number of wild ducks that you can have at your favorite shooting place will be governed by the natural foods that grow there.

Whether the Wild Ducks will stay over the entire season depends upon that food supply. Will it last throughout the season? If not, plant more now and have more growing next fall.

Did you ever try to drive a group of sparrows away from a good meal and watch them fly to the wires or a near-by building and await till all was quiet before they return to continue their meal.

It's the same with Wild Ducks. Drive them out of a good feeding place and they will slyly work their way back in pairs and trios for more.

Also Improve Fishing.

Many of the same plants that are the best wild duck coaxers have equal value as food and cover plants for Game Fish. The fish life is dependent upon plant life for its existence.

Plant Now.

One planting will make a permanent growth. We will furnish complete planting instructions which simplify the work and insures good results. Make your selection from the following page and mail it now, take advantage of the liberal discount offer.

Dear Mr. Coon - Here is a picture of our
"garden". The rats got a start on it and I put
one inch mesh around each plant about the
height of one foot above the surface of the water.
Now if I can put a screen around each of the
crops the job will be done!

Thanks for your advice and assistance,
E. H. Smith

Sept. 8 - 1942

A Picture and Notation from one of our many satisfied customers.
There is an abundance of under-surfaced duck foods growing here from
our planting that did not photograph.

William O. Coon, Naturalist

WHAT WILL HOME BE LIKE WHEN THE BOYS COME MARCHING
VICTORIOUSLY BACK?

Following our last war, our fish and game were in perilous straits.

It must not happen again. Come hell or high water -- CONSERVATION MUST GO ON!

We must save our wildlife, our hunting and fishing, for the boys in uniform as they are saving them for us. We must see to it that the America they come home to is the America they have always known and loved. ***

These are words from the pen of E. F. Warner, Conservationist and Publisher (Field and Stream).

Thanks to the combined efforts of State Fish and Game Departments, and the efforts of many sportsmen, we had the best flight of ducks last year of any time over the past 15 years. If they did not stop on your favorite waters it was because they were devoid of sufficient feed to entice them. Countless thousands of wild ducks invaded our aquatic nurseries and would have liked to eat up our stock of salable duck foods for planting, had we not driven them away. Over the entire country there was a concentration of wild ducks on the good feeding grounds, while other waters devoid of food reported few birds.

There is but one way to keep up this supply of migratory water fowl and that is, not to ease up one bit on our conservation development programs. Keep up the present feeding and breeding grounds for Wild Ducks. Plant that pond, lake, marsh or slough nearby within convenient distance of home. It's what you and thousands of others like you do that will "Keep 'Em Flying," so when our boys come home, they may again partake of their favorite sport.

A Spring planting of Natural Wild Duck Foods provides for next Fall's flight and makes a permanent stand for years to follow. Many of the same plants that are the best wild duck foods have equal value as food and cover plants for game fish. One planting improves both the hunting and fishing.

Let's welcome our sons back to a land of sports where they can enjoy the freedom of the Great Out-of-Doors that makes America what it is -- and is, in part, what our boys are fighting to preserve.
